Education

California State Polytechnic University Pomona — **Graduated May 2025**
Master of Science in Computer Science — ***GPA: 4.0/4.0***

New Horizon College of Engineering — **Graduated May 2023**
Bachelor of Engineering in Computer Science — ***CGPA: 3.75/4.0***

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, HTML/CSS

Frontend & Backend: React, Next.js, React Native, Spring Boot, Node.js, Express.js, Flask, REST APIs

Databases & Cloud: PostgreSQL, MongoDB, Firestore, Cosmos DB, AWS (Lambda, EC2), GCP, Azure DevOps, Docker, Kubernetes, CI/CD, Git

AI / ML: Cursor, Claude code, PyTorch, YOLO, CNNs, ARIMA, Google Gemini, LLM APIs

Testing & Automation: Selenium, Playwright, Appium, Cucumber/Gherkin (BDD), JUnit, JMeter, Postman

Experience

GlobalLogic — **Aug 2025 – Present**
Software Development Engineer

- Built an automated validation system for Walgreens' RxI pharmacy-inventory platform (8,000 stores, 9M+ daily patients) that cross-checks REST API responses against Cosmos DB, Azure Storage, and Databricks outputs, catching data discrepancies before release and cutting 6 weeks of manual verification per cycle.
- Architected a Java/Selenium and Cucumber BDD framework of 300+ end-to-end scenarios covering DSCSA federal compliance, audits, returns, and stock-management workflows, and wired it into the Azure DevOps CI/CD pipeline — raising automated coverage 65% and blocking regressions on every build.
- Shipped 14+ releases of a highly regulated, high-availability system serving 9M+ patients daily, owning functional, performance, audit, and access-control verification under DSCSA pharmaceutical-traceability requirements.
- Drove root-cause analysis and prioritization across Agile sprints with engineers and product managers, and contributed design and code reviews while presenting release strategy to external clients and business stakeholders.

Method, Inc. — **Jun 2025 – Aug 2025**
Full-Stack Engineering Intern

- Cut internal technology-discovery time by 60% for Method's 500-engineer org by building and shipping TechDash, a discovery platform that unified 5 fragmented catalog types into one searchable model with Google Gemini-powered natural-language search.
- Designed and enforced organization-wide authorization for Method's 500-person org by modeling a 3-tier RBAC scheme (admin/editor/viewer) with Firebase Auth middleware, server-protected routes, and indexed Firestore queries, making unauthorized access the default-hard path.
- Delivered real-time CRUD, cross-catalog entity linking, and multi-filter search by engineering full-stack modules in React, Next.js, TypeScript, and Node.js/Express backed by Firestore on Google Cloud Functions.

California State Polytechnic University, Pomona — **Aug 2024 – May 2025**
Computer Science Researcher, Autonomous Systems Lab

- Reduced vehicle-location update latency by 30% across 10+ simulated campus routes by building a React Native/Expo autonomous ride-sharing app integrating ROS2, GPS tracking, and YOLO-based perception.
- Authored two ASEE Conference papers on autonomous vehicles (End-to-End Networks for Vehicle Control and Toward Equitable AV Deployment), covering CNN-based vehicle control and equitable AV deployment frameworks.

Method, Inc. — **Jun 2024 – Jul 2024**
Software Engineering Intern

- Lifted learner engagement by 25% across 44,000+ employees by building a gamified quiz platform (React, Node.js, Firebase Functions, Firestore) with assessments, skill-mastery tracking, and leaderboards inside an enterprise learning portal.
- Accelerated quiz rollout by 30% by engineering secure 3-role workflows (admin/author/learner) with Google SSO, OAuth 2.0, JWT access control, and REST APIs over Firestore.

Projects

Basis - Stock Analysis & Trading Simulation Platform | Live Demo | GitHub

- Built a full-stack stock-research and paper-trading platform (Next.js 15, TypeScript, SQLite/Drizzle) for 40+ users, featuring reliable trade processing with exact balance tracking and a walk-forward-validated forecasting model that surfaces predictions only when they beat naive baselines, deployed via Dockerized CI/CD.

Publications

Published two IEEE conference papers: Law Enforcement Companion and Utilising Deep Learning as a Law Enforcement Ally, designing a cloud-deployed law-enforcement system with Heroku, face recognition models, and public-upload reporting to support scalable fugitive detection.
