📍 San Mateo, CA | 📞 512-367-2754 | ✉ shreyaschaudhary3@gmail.com | 🔗 [linkedin.com/in/shreyaschaudharysc/](https://www.linkedin.com/in/shreyaschaudharysc/) | 🐙 github.com/shreyas463 | 🌐 [Portfolio](#)

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, Go, SQL, HTML/CSS

Backend & Distributed Systems: Microservices, REST APIs, distributed data flows, Spring Boot, Node.js/Express, Flask, GraphQL, Swagger/OpenAPI, object-oriented design

Frontend & UI/UX: React, Next.js, TypeScript, Three.js/React Three Fiber, Zustand, responsive interfaces, real-time dashboards

Cloud, Containers & CI/CD: Azure, AWS, GCP, Docker, Kubernetes, Jenkins, Azure DevOps, GitHub Actions, Git, Linux, AI-assisted coding (GitHub Copilot, Claude Code, Cursor)

Data & Testing: Cosmos DB, Azure Storage, Databricks, PostgreSQL, MongoDB, Firestore, unit, integration & regression testing, Vitest, Postman

Experience

GlobalLogic

Aug 2025 – Present

Software Development Engineer

- Designed and built an automated data-validation service (Java) for Walgreens' RxI pharmacy-inventory platform (8,000 stores, 9M+ daily patients), building a pipeline that reconciles REST API contracts (Rest Assured, Swagger/OpenAPI) against Cosmos DB, Azure Storage, and Databricks outputs, surfacing schema and data discrepancies before production and replacing 6 weeks of manual verification per cycle.
- Investigate and resolve production incidents across a regulated, high-availability distributed system, tracing each anomaly through the API and storage layers to isolate exactly where records diverged, then shipping both the fix and the guardrail, resolving 5–8 production anomalies per month.
- Own the build and deployment path end to end: authoring and maintaining 300+ automated Java scenarios across new and legacy features, accelerated by AI coding tools such as GitHub Copilot, and wiring them into Jenkins and Azure DevOps CI/CD gates (Docker, Linux) spanning DSCSA compliance, audits, returns, and stock management, raising automated coverage 65% and blocking regressions before deploy.
- Refine requirements and user stories with product managers, participate in peer reviews of code and solution designs, and present release readiness to external clients and stakeholders, shipping 14+ releases in Agile sprints.

Method, Inc.

Jun 2025 – Aug 2025

Full-Stack Engineering Intern

- Built and shipped TechDash zero to one, a full-stack platform (React, Next.js, TypeScript, Node.js/Express, Firestore on Google Cloud Functions) that consolidated 5 fragmented catalogs into one searchable model, cutting technology-discovery time 60% for Method's 500-engineer org.
- Designed the interface end to end by applying UI/UX principles across real-time CRUD, cross-catalog entity linking, indexed multi-filter search, and Gemini-powered natural-language querying, making fragmented operational data usable by non-technical staff.

California State Polytechnic University, Pomona

Aug 2024 – May 2025

Computer Science Researcher, Autonomous Systems Lab

- Built a React Native/Expo vehicle-tracking interface by integrating ROS2, GPS tracking, and YOLO-based perception with live robot telemetry, cutting vehicle-location update latency 30% across 10+ simulated campus routes.
- Engineered a real-time perception pipeline for safer navigation using YOLOv8, cutting false positives in pedestrian detection by 30%.

Method, Inc.

Jun 2024 – Jul 2024

Software Engineering Intern

- Built a gamified enterprise learning platform by implementing assessments, skill-mastery tracking, and leaderboards (React, Node.js, Firebase Functions, Firestore), increasing learner engagement 25% across 44,000+ employees.
- Engineered secure admin/author/learner workflows by integrating Google SSO, OAuth 2.0, JWT access control, and REST APIs over Firestore, accelerating feature rollout 30%.

Projects

Basis - Stock Analysis & Trading Simulation Platform | [Live Demo](#) | [GitHub](#)

- Built a full-stack trading platform (Next.js 15, React, TypeScript, Node.js, SQLite/Drizzle ORM) by modeling transactions as an explicit state machine that rejects invalid transitions before touching state and reconciles every balance update against the ledger, deployed via Dockerized CI/CD and demoed live to a class of 40+.

Publications

- Four peer-reviewed conference papers on deep learning and autonomous systems. ASEE: [End-to-End Networks for Vehicle Control, Toward Equitable AV Deployment](#); IEEE: [Law Enforcement Companion, Deep Learning as a Law Enforcement Ally](#).

Education

California State Polytechnic University Pomona

Graduated May 2025

Master of Science in Computer Science

GPA: 4.0/4.0

New Horizon College of Engineering

Graduated May 2023

Bachelor of Engineering in Computer Science

CGPA: 3.75/4.0
