

SHREYAS CHAUDHARY

San Mateo, CA | 512-367-2754 | shreyaschaudhary3@gmail.com | linkedin.com/in/shreyaschaudharysc | github.com/shreyas463 | [Portfolio](#)

Technical Skills

Frontend: React, TypeScript, JavaScript, Next.js, HTML/CSS, Tailwind CSS, responsive layouts, reusable components

State & Visualization: Zustand, TanStack Query, Three.js, React Three Fiber, Lightweight Charts, Recharts

Backend & Data: Node.js/Express, REST APIs, Python, Java, SQL, Firestore, PostgreSQL, Cosmos DB

Quality & Delivery: Vitest, Playwright, Selenium, JUnit, Git, GitHub Actions, Jenkins, Azure DevOps, CI/CD

Experience

GlobalLogic

Mar 2026 – Present

Software Engineer – Walgreens Boots Alliance

- Built a Java reconciliation service for pharmacy-inventory data, detecting missing, delayed, and mismatched records across REST APIs, Cosmos DB, Azure Storage, and Databricks; eliminated nearly 6 weeks of manual validation per release.
- Added AI-assisted mismatch classification and investigation recommendations, reducing engineer triage time roughly 30%; evaluated against 100+ resolved mismatches with about 90% accuracy in identifying issue categories.
- Debugged production failures across application, API, and data layers, isolating a race condition between batch jobs that produced inconsistent downstream records.

GlobalLogic

Aug 2025 – Mar 2026

Software Development Engineer in Test, Internship – Walgreens Boots Alliance

- Built Java/Selenium/Cucumber automation for 300+ pharmacy workflows across web, mobile, APIs, and backend systems, bringing targeted regression coverage to approximately 65%.
- Built performance-analysis tooling around JMeter, converting raw load-test output into p90/p95/p99 latency, throughput, and failure-rate reports to catch regressions before release.

Method, Inc.

Jun 2025 – Aug 2025

Full-Stack Engineering Intern

- Built and shipped TechDash in React, Next.js, and TypeScript, turning 5 fragmented technology catalogs into one searchable interface backed by Node.js and Firestore; cut discovery time 60% for a 500-engineer organization.
- Added natural-language search with Gemini, translating user questions into validated structured queries to help engineers find technologies, projects, tools, clients, and teams through one interface.

California State Polytechnic University, Pomona

Aug 2024 – May 2025

Computer Science Researcher, Autonomous Systems Lab

- Built a React Native/Expo interface for ride scheduling and live vehicle tracking, integrating GPS telemetry with ROS2 services across 10+ simulated campus routes; reduced location-update latency 30%.

Method, Inc.

Jun 2024 – Jul 2024

Software Engineering Intern

- Built interactive assessments, skill-mastery tracking, scoring, and leaderboards in React, backed by Node.js and Firebase; increased learner engagement 25% on an enterprise platform used by 44,000+ employees.

Projects

rackLAB – Interactive 3D Data-Center Playground | React, TypeScript, Three.js, Zustand | [Live](#) | [GitHub](#)

- Built a browser-based 3D simulation with 6 interactive racks and 36 servers, equipment inspectors, thermal views, and live dashboards; synchronized the scene and React interface through a shared Zustand store.
- Lazy-loaded and prefetched the 3D bundle; kept per-frame animation outside React state updates and separated the fixed-timestep simulation from rendering, with CSS design tokens and reduced-motion support.

Basis – Stock Research & Paper-Trading | Next.js, React, TypeScript, Tailwind | [Live](#) | [GitHub](#)

- Built a stock-research workbench with sortable market tables, portfolio views, and interactive candlestick charts with range selection, indicator overlays, and crosshair readouts; reused typed UI components across screens.
- Managed server state with TanStack Query and memoized derived chart data; added responsive layouts, loading skeletons, retryable errors, empty states, and source labels for delayed or synthetic market data.

WalletLens – Personal Finance Dashboard | Next.js, TypeScript, Tailwind, PostgreSQL | [Live](#) | [GitHub](#)

- Built responsive spending dashboards and a transaction explorer with account/category filters, 50-row pagination, inline category editing, and reusable form, card, and loading components.
- Debounce search by 250 ms and guarded state updates with request IDs so stale responses cannot overwrite newer results; reset pagination with filter changes and kept category controls accessible on narrow screens.
