

SHREYAS CHAUDHARY

📍 San Mateo, CA | Relocating to New York City | 📞 512-367-2754 | ✉ shreyaschaudhary3@gmail.com | 🔗 [linkedin.com/in/shreyaschaudharysc](https://www.linkedin.com/in/shreyaschaudharysc) | 🌐 github.com/shreyas463 | 📁 [Portfolio](#)

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, Go, SQL, HTML/CSS

Full-Stack: React, Next.js (App Router), Tailwind, Zustand, Three.js, Node.js/Express, Flask, Spring Boot, REST, gRPC, GraphQL, Swagger/OpenAPI, microservices

AI & Agentic Development: Claude Code, Cursor, Anthropic and Gemini APIs, prompt design, tool-calling and agent workflows, LLM feature integration, PyTorch

Cloud & DevOps: AWS, GCP, Azure, Vercel, Docker, Kubernetes, GitHub Actions, Jenkins, Azure DevOps, Git, Linux

Data & Testing: PostgreSQL, Firestore, Cosmos DB, Redis, Kafka, Databricks, Prometheus, Grafana, Vitest, Jest, pytest

Experience

GlobalLogic

Mar 2026 – Present

Software Engineer

- Designed and built a Java data-validation service for Walgreens' RxI pharmacy-inventory platform (8,000 stores, 9M+ daily patients), reconciling REST API contracts against Cosmos DB, Azure Storage, and Databricks output to catch schema and data mismatches before production, replacing 6 weeks of manual verification per cycle.
- Ran requirements directly with client stakeholders, translating DSCSA regulatory and business rules into concrete validation logic and automated release gates in Jenkins and Azure DevOps (Docker, Maven) that block noncompliant builds, shipping 14+ releases.
- Debug production issues in a high-availability distributed system, tracing anomalies through the API, storage, and Databricks layers, then shipping the fix plus a guardrail against recurrence, resolving 5–8 anomalies monthly.
- Use Claude Code and Cursor daily as the primary development loop, driving agentic refactors, test scaffolding, and codebase exploration across a large legacy service, cutting ramp time on unfamiliar modules 40%.

GlobalLogic

Aug 2025 – Mar 2026

Software Development Engineer in Test, Internship (converted to full-time on performance)

- Architected production-scale Java/Selenium automation for the RxI platform covering 300+ end-to-end scenarios across handheld, desktop, and corporate systems, and built REST API and database validation with Rest Assured and SQL against Swagger/OpenAPI contracts, raising automated coverage 65%.

Method, Inc.

Jun 2025 – Aug 2025

Full-Stack Engineering Intern (returning intern; Software Engineering Intern, Jun 2024 – Jul 2024)

- Built and shipped TechDash zero to one, a full-stack internal engineering platform (Next.js, React, TypeScript, Node.js/Express, Firestore on Google Cloud Functions) that consolidated 5 fragmented catalogs into one searchable system, cutting technology-discovery time 60% for Method's 500-engineer org.
- Scoped the product directly with its users, running discovery interviews with engineering leads to define the data model and search behavior with no PM in between, then iterating on real usage feedback across 5 release cycles.
- Shipped a Gemini-powered natural-language query layer over the catalog, letting engineers ask questions in plain English instead of navigating filters, owning prompt design, API integration, frontend, and data model end to end.
- Returned after a first internship building a gamified enterprise learning platform (React, Node.js, Firebase Functions, Firestore) with assessments, skill-mastery tracking, and leaderboards, increasing learner engagement 25% across 44,000+ employees.

California State Polytechnic University, Pomona

Aug 2024 – May 2025

Computer Science Researcher, Autonomous Systems Lab

- Engineered a real-time YOLOv8 perception pipeline in Python with ROS2 and live vehicle telemetry for an autonomous ride-sharing system, and built Gazebo simulation scenarios to validate navigation before road testing, reducing pedestrian-detection false positives 30%.

Projects

WalletLens - Personal Finance & Subscription Tracker | [Live Demo](#) | [GitHub](#)

- Built and deployed a full-stack finance app solo (Next.js 16 App Router, TypeScript, PostgreSQL, Tailwind) that links real bank accounts through Plaid, with bcrypt/JWT auth and encrypted access-token storage.
- Designed a recurrence-detection engine that infers subscriptions and paydays from transaction timing rather than a merchant list, driving a 30-day cash-flow forecast and alerting, covered by 193 tests.

RackLab - Interactive 3D Systems Simulator | [Live Demo](#) | [GitHub](#)

- Built a browser-based data-center simulator (React, TypeScript, Three.js, Zustand) with live temperature, power, alert, and failure telemetry, separating simulation logic into a pure testable module covered by 38 Vitest tests and deployed automatically via GitHub Actions.

Publications

- Four peer-reviewed conference papers on deep learning and autonomous systems: [End-to-End Networks for Vehicle Control](#), [Equitable AV Deployment](#) (ASEE); [Law Enforcement Companion](#), [Deep Learning as a Law Enforcement Ally](#) (IEEE).

Education

California State Polytechnic University, Pomona | M.S. Computer Science | GPA: 4.0/4.0

Graduated May 2025

New Horizon College of Engineering | B.E. Computer Science | CGPA: 3.75/4.0

Graduated May 2023
