

SHREYAS CHAUDHARY

📍 San Mateo, CA | 📞 512-367-2754 | ✉️ shreyaschaudhary3@gmail.com | 🔗 [linkedin.com/in/shreyaschaudharysc/](https://www.linkedin.com/in/shreyaschaudharysc/) | 🐙 github.com/shreyas463 | 🌐 [Portfolio](#)

Technical Skills

Languages: Python, TypeScript, JavaScript, Go, Java, SQL, HTML/CSS

Full-Stack & APIs: React, Next.js, Node.js/Express, REST, gRPC, GraphQL, Spring Boot, Flask, Swagger/OpenAPI, microservices

AI & LLMs: Claude & Gemini APIs, LLM integration, prompt engineering, natural-language query interfaces, agentic coding tools (Claude Code, Cursor, Copilot)

Data, Messaging & Observability: PostgreSQL, Cosmos DB, Firestore, Redis, Kafka, Databricks, Azure Storage, Prometheus, Grafana

Cloud, Containers & CI/CD: AWS, GCP, Azure, Docker, Kubernetes, GitHub Actions, Jenkins, Azure DevOps, Git, Linux

Experience

GlobalLogic

Mar 2026 – Present

Software Engineer

- Designed and built a Java data-validation service for Walgreens' RxI pharmacy-inventory platform (8,000 stores, 9M+ daily patients), reconciling REST API contracts against Cosmos DB, Azure Storage, and Databricks output to catch schema and data mismatches before production, replacing 6 weeks of manual verification per cycle.
- Own the build and deploy path end to end, authoring Jenkins and Azure DevOps pipelines (Docker, Maven) that gate every release on DSCSA compliance, audit, returns, and stock-management checks, shipping 14+ releases.
- Debug production issues across a high-availability distributed system, tracing anomalies through the API, storage, and Databricks layers to isolate where records diverged, then shipping both the fix and the guardrail that prevents recurrence, resolving 5–8 anomalies per month.

GlobalLogic

Aug 2025 – Mar 2026

Software Development Engineer in Test, Internship

- Architected a Java test-automation framework (Selenium, TestNG, Maven) on the Page Object Model with reusable utility libraries, automating 300+ end-to-end scenarios across DSCSA federal compliance, audits, returns, and stock management on handheld, desktop, and corporate platforms, raising automated coverage 65%.
- Built REST API and database validation with Rest Assured, Postman, and SQL, verifying payloads, authentication, and business logic against Swagger/OpenAPI contracts and cross-checking record integrity across 3 distributed data stores.

Method, Inc.

Jun 2025 – Aug 2025

Full-Stack Engineering Intern

- Built and shipped TechDash zero to one, a full-stack platform (React, Next.js, TypeScript, Node.js/Express, Firestore on Google Cloud Functions) that consolidated 5 fragmented catalogs into one searchable model, cutting technology-discovery time 60% for Method's 500-engineer org.
- Shipped a Gemini-powered natural-language query layer turning plain-English questions into retrieval over the indexed catalog, plus real-time CRUD, cross-catalog entity linking, and multi-filter search, making fragmented operational data usable by non-technical staff.

California State Polytechnic University, Pomona

Aug 2024 – May 2025

Computer Science Researcher, Autonomous Systems Lab

- Optimized Gazebo simulation environments for autonomous-vehicle testing, accelerating model iteration speed and cutting real-world validation costs 60%.
- Engineered a real-time perception pipeline using YOLOv8 for safer navigation, reducing false positives in pedestrian detection 30%.

Method, Inc.

Jun 2024 – Jul 2024

Software Engineering Intern

- Built a gamified enterprise learning platform by implementing assessments, skill-mastery tracking, and leaderboards (React, Node.js, Firebase Functions, Firestore), increasing learner engagement 25% across 44,000+ employees.

Projects

Basis - Stock Analysis & Trading Simulation Platform | [Live Demo](#) | [GitHub](#)

- Built a full-stack trading platform (Next.js 15, React, TypeScript, Node.js, SQLite/Drizzle ORM) by modeling transactions as an explicit state machine that rejects invalid transitions before touching state and reconciles every balance update against the ledger, deployed via Dockerized CI/CD and demoed live to a class of 40+.

Tally - High-Throughput Event Counting & Analytics Service | [GitHub](#)

- Built a Go event-ingest service decoupling acceptance from storage behind a bounded queue, flushing batches through one atomic CTE that inserts, deduplicates, and increments per-minute rollups so replays cannot double-count, hardened with a Kafka durable mode committing offsets only after inserts, Prometheus metrics, and Docker/Kubernetes CI, verified by a chaos script killing a worker mid-batch at 0 events lost.

Publications

- Four peer-reviewed conference papers on deep learning and autonomous systems: [End-to-End Networks for Vehicle Control, Equitable AV Deployment](#) (ASEE); [Law Enforcement Companion](#), [Deep Learning as a Law Enforcement Ally](#) (IEEE).

Education

California State Polytechnic University, Pomona

M.S. Computer Science

May 2025

GPA: 4.0/4.0

New Horizon College of Engineering

B.E. Computer Science

May 2023

CGPA: 3.75/4.0
